

# Janicke Review

## 1 Title and author of paper

OptiRun - Janicke Falch  
review by Fredrik

## 2 Summary of paper

Designing and implementing a framework for user-level automated testing. The tool will include an algorithm for test allocation on a distributed network and a web-based interface.

## 3 Good things about the paper

The information is explained nice and clearly. The code listings are a nice inclusion. The topics are placed in a logical order and there is a nice flow. It seems you know what you are writing about and your design seems sound and thought out.

## 4 Major Comments

Even though there is a nice flow to the topics and nothing is poorly explained, it is a bit of a hefty read, some more code listings or figures where ever possible would be nice, to make the thesis feel less like a wall of text.

## 5 Minor comments

There are a few grammatical errors. There is possibly one spelling error(might be more); "oftest", i must admit i don't know if oftest is a valid word or not, but in my mind it should be often.

## 6 Recommendations

I recommend you fix your grammatical errors and find some way of fracturing the wall of text, by listing, figure or some other formating. Overall though, it's a really nice thesis, good work Janicke!
