

1 Title and author of paper

Title pending - Janicke Falck

2 Summary of paper

The goal of the thesis is to develop a test automation tool for web applications, designed specifically for efficiency and control. It utilizes the Selenium framework, a tool for test automation for web browsers.

3 Good things about the paper

The purpose of the thesis is easy to understand after reading the introduction. The chapter about technology is presented nicely with a few examples of source code. I also like the section about software testing which gives a good, short introduction to software and automated testing.

4 Major comments

No source provided for the information in chapter 2.3.2 Sauce Labs. You also state in 1.1 that Altibox has grown at a higher pace than originally anticipated. Maybe you should provide a source that can back this up?

5 Minor comments

A few grammatical errors:

- 2.1, seventh paragraph - "This project **is** concentrates on automated testing..."
- 3.2.1, second paragraph - "... specified web browser **specified**."

New terms introduced are not italicized:

- 2.1 - *static* and *dynamic* testing

Incomplete sentence:

- 3.3 - first sentence in the last paragraph.

6 Recommendations

Fix the comments above. A visualization of the tool and how all its components interact with each other would be nice.
